

GILES CHEMICAL CORPORATION		
COMPANY PROCEDURE		
Standard Operating Procedure	Page : 1 of 1	Revision : Date : 5/12/2006
Author: Patrick Owen	Title: (00) Restarting the Monitoring System Screen	

Manuf-Tech-08

Personnel responsible:

1. All

Safety:

No extra precautions are necessary. Do not drink or eat around electrical equipment.

Summary:

The Foxboro A2 DCS monitoring system controls each of the 15 major control loops in the plant. If the system kicks you out, you may need to restart the system. Some knowledge of the system is needed, but it is not a hard task. If you cannot get it the first time or feel uncomfortable trying it, call the Process Engineer for help.

Procedure:

1. Cut off the Monitoring System station by pressing the power button under the bottom right of the screen.
2. Wait a moment, and press the same button again to restart the system.
3. The first login will ask for the administrator's password. Erase "administrator" and type in "mon1" as the user and "mon1" as the password.
4. After a few minutes another login will appear.
5. Again, the user and password are "mon1" and "mon1".
6. After logging in the second time, the Monitoring System screen will appear after a few minutes.
7. If the screen has not appeared and started operating after 10 minutes, call for technical assistance.
8. Document the restart on the shift log so others will know.
