## Swab Test Manual Line 4

Swab tests are to be performed any time a line is being switched from scented salt production to unscented production. When performing a swab test follow *Swabbing After Scented Salt (R12-PR-100-015)*.

- Label a zip lock bag for each of the following 5 points to be swabbed.
- Wearing latex gloves roll each end of the swab on the station being swabbed, place in the zip lock bag labeled for that station and close seal.
- Submit bags to the Quality Unit for testing and wait for results before starting production on the line being tested.
